

Work log and change record

SMARTSOURCING USA Academy — LMS launch preparation

PERIOD	REPOSITORY
13–14 August 2026	ssa-academy
LIVE SITE	HOSTING
https://smartsourcingacademy.com	Laravel Forge + DigitalOcean
WORKSPACE	CDN / PROXY
SSU Academy (Laravel + Inertia / React)	Cloudflare (Free) — Active as of 14 Aug 2026

Prepared for Smart Sourcing USA. This document records code changes, infrastructure work, and decisions from the 13–14 August 2026 session. It is not a legal contract and does not replace Terms, Refund Policy, or NDA pages on the live site.

1. Executive summary

This session prepared the public LMS for launch. Work covered homepage design, registration fields, legal copy alignment, and putting Cloudflare in front of the live domain. Video delivery at 10,000 concurrent viewers was reviewed and is **not yet complete** — that still depends on Bunny Stream being enabled and older lessons re-uploaded.

STATUS	ITEM
DONE	Original hero blueprint artwork (not copied from a third-party PNG)
DONE	Hero layout: 330px desktop band, logo size B (148px), one-line tagline + description
DONE	Hero video: muted autoplay; tap/click overlay to unmute (mobile freeze fixed)
DONE	FAQ tabs rebuilt as hexagon + inward V-notch + right arrow
DONE	Refund Policy rewritten to match Terms: all payments non-refundable
DONE	Footer Company links: FAQs added under About Us
DONE	Registration extras: estimating software, construction experience, Construction VA
DONE	Cloudflare connected, nameservers at GoDaddy, SSL Full (strict), Always HTTPS
DONE	Live verification: <code>server: cloudflare</code> and <code>cf-ray</code> on the homepage
OPEN	Cloudflare cache rules (public pages vs dashboard / player)
OPEN	Bunny Stream enable + re-upload older lessons (needed for high concurrent video)
OPEN	SignWell e-sign for 1,000+ NDAs (recommendation only; not implemented)

2. What we did (timeline)

2.1 Homepage hero — original blueprint

CODE

The hero background was rebuilt as original SVG (hand-authored), not a copy of a third-party PNG. Two layers:

- **Top band:** dense CAD-style building / skyline blueprint behind Welcome + logo + video.
- **Lower band:** house-style blueprint behind the tagline and description.

Constraint recorded: do not copy third-party artwork; keep original SVG blueprints.

2.2 Hero layout and copy

CODE

- Desktop top band locked at **330px**.

- Logo height option **B**: 100 / 120 / 140 / **148px** (sm → lg).
- “Welcome to” + logo centered; video beside on desktop.
- Tagline kept to **one line** (`whitespace-nowrap` + fluid type).
- Description sits under the tagline.

Primary file: `resources/js/pages/intro/partials/ssu-home/hero.tsx`

2.3 Hero video autoplay and mobile tap

CODE

Browsers block autoplay with sound. The player now:

- Starts **muted** and autoplays in a loop.
- Sets Plyr `clickToPlay: false` so a tap does not pause the video.
- Shows a full-video unmute overlay (speaker icon). First tap/click unmutes and continues playback.

This fixed the mobile bug where a tap both unmuted and paused (video appeared frozen).

Primary file: `resources/js/components/hero-video-player.tsx`

2.4 FAQ hexagon tabs

CODE

FAQ category tabs were rebuilt to match the reference look without copying artwork:

- Regular flat-top hexagon (maroon).
- Navy bar with an inward 60° V-cut on the left and an arrow on the right.
- 3px visual gap between hexagon and bar.

Files:

- `resources/css/ssu-design-system.css` — `.ssu-faq-tab`, `.ssu-faq-hex`, `.ssu-faq-bar`
- `resources/js/pages/intro/partials/ssu-home/ssu-faqs.tsx` (and related FAQ UI)

2.5 Refund Policy aligned with Terms

CODE

Terms already stated payments are non-refundable. The Refund Policy page was rewritten to match, then applied via migration so the live CMS row updates.

Policy now states:

- All fees are final and non-refundable (courses, subscriptions, enrollment, other paid services).
- No refund for unused access, change of mind, partial completion, dissatisfaction, inactivity, or termination for Terms/NDA violation.
- Subscription cancel stops the next renewal; it does not refund the current period.
- Billing errors (duplicate / unauthorized) can be reviewed via **training@smartsourcingusa.com**.

Files:

- `database/data/utills/InnerSections.php` — source copy

- `database/migrations/2026_08_13_000002_update_refund_policy_to_non_refundable.php`
- `database/data/PageData.php` — seed/default meta

Deploy note: run `php artisan migrate` on production if this migration has not already been applied. Admin → Pages can also be used to confirm the live Refund Policy text.

2.6 Footer — FAQs under About Us

CODE

Company footer column now includes **FAQs** (`/faqs`) immediately after **About Us**.

Files:

- `database/seeder/FooterSeeder.php`
- `database/migrations/2026_08_13_000003_add_faqs_link_to_footer_company.php`

2.7 Registration profile extras

CODE

New required fields on public registration, stored on `users` and shown on the candidate profile in Admin:

FIELD	TYPE	NOTES
<code>estimating_software</code>	JSON array	Multi-select; "None" is exclusive; "Others" requires a text value
<code>estimating_software_other</code>	string, nullable	Required only when Others is selected
<code>construction_experience</code>	string	Years of construction experience (select)
<code>worked_as_construction_va</code>	boolean	Have you worked as a Construction Virtual Assistant?

Files:

- `database/migrations/2026_08_13_000001_add_registration_profile_fields_to_users_table.php`
- `app/Models/User.php`
- `app/Http/Controllers/Auth/RegisteredUserController.php`
- `resources/js/pages/auth/register.tsx`
- `resources/js/pages/dashboard/candidates/show.tsx`
- `resources/js/types/index.d.ts`

3. Cloudflare — put the site behind the proxy

INFRASTRUCTURE No LMS code change. Domain was **connected** (not transferred, not purchased).

3.1 What "move the domain" meant

- **Done:** point nameservers at Cloudflare so Cloudflare can proxy traffic.
- **Not done / not needed:** transfer the domain away from GoDaddy.

GoDaddy now shows DNS as managed elsewhere / IDLE. That is expected. Do not revert nameservers.

3.2 Nameservers (GoDaddy → Cloudflare)

RECORD	VALUE
Nameserver 1	ignacio.ns.cloudflare.com
Nameserver 2	savanna.ns.cloudflare.com

3.3 DNS records

TYPE	NAME	TARGET	PROXY
A	@ / smartsourcingacademy.com	157.230.37.127 (Forge)	Proxied (orange cloud)
CNAME	www	smartsourcingacademy.com (or Forge host)	Proxied (orange cloud)
MX / TXT / email	as existing	mail provider	DNS only (grey)
_domainconnect	_domainconnect	GoDaddy helper	DNS only (grey)

3.4 SSL and HTTPS

- SSL/TLS encryption mode: **Full (strict)** — set 14 August 2026.
- Edge Certificates: **Always Use HTTPS** — On.

Do not use Flexible SSL (that would encrypt browser→Cloudflare only and can break cookies / mixed content).

3.5 Verification

First HAR export (before orange-cloud / propagation) showed `server: nginx` and no `cf-ray` on the HTML document. Traffic was still hitting Forge directly. Cloudflare headers on that file were only for R2 object storage URLs, not the website.

Second check (Headers screenshot, 13 Aug 2026 20:40 UTC / 14 Aug 04:40 PHT) confirmed the homepage is proxied:

HEADER	VALUE	MEANING
Server	cloudflare	Request hit Cloudflare first
Cf-Ray	a2aa88f2693c8d05-MNL	Proxied; Manila edge
Cf-Cache-Status	DYNAMIC	HTML not cached (Laravel sends <code>no-cache</code> , <code>private</code> + cookies)
Server-Timing	cfEdge ~34ms; cfOrigin ~956ms	Edge is fast; origin still does the page work

Cloudflare proxy is live. `DYNAMIC` is expected until cache rules are added. It is not a failure.

4. Decisions and guidance (no code in this session)

4.1 E-sign for 1,000+ NDAs — SignWell

RECOMMENDATION

For high-volume NDA signing, SignWell API was recommended over building a custom signer. Not implemented in code. Revisit when you are ready to connect templates, webhooks, and stored signed PDFs.

4.2 Public launch vs 10,000 concurrent users

CAPACITY

The LMS can launch publicly on the current Forge + Cloudflare setup for normal traffic. **10,000 concurrent video viewers is not supported on a single Forge app server** if lessons stream from Laravel / R2 signed URLs through the origin.

Path to that capacity:

1. Enable Bunny Stream in Admin → Settings → Bunny Stream.
2. Re-upload older lessons so they get a `bunny_video_id`.
3. Keep Cloudflare in front for HTML/assets; let Bunny (player.mediadelivery.net / b-cdn.net) carry video.
4. Later: Redis, queue workers, and more than one app server if app traffic (not just video) grows.

Cloudflare empty analytics / "no requests in 24h" right after going Active is stats lag, not a broken proxy.

4.3 Autoplay with sound

Chrome, Safari, and mobile browsers will not autoplay with sound without a user gesture. A popup cannot legally bypass that. The implemented approach (muted autoplay + first tap to unmute) is the reliable pattern.

5. File index — code touched this session

FILE	CHANGE
<code>resources/js/pages/intro/partials/ssu-home/hero.tsx</code>	Original SVG blueprints; 330px band; logo 148px; one-line tagline
<code>resources/js/components/hero-video-player.tsx</code>	Muted autoplay; clickToPlay false; unmute overlay
<code>resources/css/ssu-design-system.css</code>	FAQ hexagon + V-notch + arrow tabs
<code>resources/js/pages/intro/partials/ssu-home/ssu-faqs.tsx</code>	FAQ tab markup to match new CSS
<code>database/data/utlis/InnerSections.php</code>	Non-refundable Refund Policy (and Terms refresh)
<code>database/data/PageData.php</code>	Refund policy meta defaults
<code>database/migrations/2026_08_13_000002_...refund_policy...</code>	Update CMS pages on migrate
<code>database/seeders/FooterSeeder.php</code>	FAQs link in Company column
<code>database/migrations/2026_08_13_000003_...faqs_link...</code>	Insert FAQs after About Us in live footer
<code>database/migrations/2026_08_13_000001_...users...</code>	Registration extra columns
<code>app/Models/User.php</code>	Fillable / casts for new fields
<code>app/Http/Controllers/Auth/RegisteredUserController.php</code>	Validation and persist
<code>resources/js/pages/auth/register.tsx</code>	Full-page register UI
<code>resources/js/pages/dashboard/candidates/show.tsx</code>	Admin display of new fields
<code>resources/js/types/index.d.ts</code>	TypeScript user fields

Bunny Stream admin UI already existed (`resources/js/pages/dashboard/settings/bunny-stream.tsx`). It was not newly built today; it remains the switch for video CDN.

6. Production checklist

#	ACTION	OWNER / WHERE	STATUS
1	Deploy code + run migrations 000001, 000002, 000003	Forge deploy / <code>php artisan migrate</code>	Confirm on server
2	Confirm Refund Policy page on live site	https://smartsourcingacademy.com/refund-policy	Confirm
3	Confirm footer FAQs under About Us	Live homepage footer	Confirm
4	Cloudflare orange cloud on A + www	Cloudflare DNS	Done
5	SSL Full (strict) + Always HTTPS	Cloudflare SSL/TLS	Done
6	Homepage shows <code>cf-ray</code>	Chrome DevTools → Network	Done
7	Cache rules: cache public; bypass <code>/dashboard*</code> , <code>/play-course*</code> , auth, Stripe	Cloudflare Rules	Not yet
8	Enable Bunny Stream + re-upload old lessons	Admin Settings	Not yet
9	SignWell (or other e-sign) for NDA volume	Ops / later sprint	Not yet

7. Suggested Cloudflare cache rules (not applied yet)

When you want them:

- **Cache:** `/`, `/faqs`, `/about-us`, `/courses*`, static `/build/*`
- **Bypass (do not cache):** `/dashboard*`, `/play-course*`, login/register, Stripe webhooks/checkout, Admin

Until then, Laravel's `Cache-Control: no-cache, private` plus session cookies keep HTML as `DYNAMIC`. That is safe.

8. Important operational notes

- Do not revert GoDaddy nameservers back to GoDaddy DNS.
- Do not set Cloudflare SSL to Flexible.
- R2 file URLs already show Cloudflare headers; that is storage, not the site proxy. The site proxy is confirmed only when the HTML document has `cf-ray`.
- Hero video on the homepage may still load from R2 until Bunny is enabled for that asset.
- Legal pages live in the database; after migrate, also spot-check Admin → Pages.

End of document — SMARTSOURCING USA Academy work log, 13–14 August 2026.
